

# Importing Images, Sound, and Video

1. Double-click on the iMovie icon to launch the software. From the iMovie **File** menu, select *New Project*. Assign a title to your new project, then **Save** your project to the iMovie folder in your project directory (see the *Naming and Organizing Your Files* Guide for tips on digital story file structure).

2. To import your sound, images, and video files, select *Import* from the **File** menu. Navigate to the folder where your files are saved and select the file(s) you want to import. Click **Open**. Repeat this step until all your footage has been imported.

Imported stills and video files  
are added to the Clips Pane.

Imported audio files are added  
to the audio track on the timeline.
