

Resizing Your Images

Re-size Your Image

To crop an image

1. Select the **Crop** tool from the toolbar. 
2. Click and hold the left mouse button while dragging the mouse over the part of the image you want to keep. This creates the cropping marquee.
3. Adjust the marquee by dragging the square handles at the edges of the marquee.
4. Hit **Enter** to apply the crop.

Optimize Image Resolution for Video

The optimal resolution for images presented on a computer monitor or television screen is 72 dpi (dots per inch). Images with a higher resolution (such as those downloaded from a digital camera) add unnecessary size to a movie file. For this reason, we suggest formatting all your still images to 72 dpi.

To format Image Size:

1. From the Image menu, select **Image Size**.
2. Set the resolution to 72 pixels/inch. Click **OK**.
